

PLATFORM OVERVIEW

Titan

HealthConnect

Cloud-Native Telehealth & Integrated Patient Care Coordination Platform

| The Care Fragmentation Crisis

- ✓ **Siloed Medical Records:** Crucial medical data remains trapped inside isolated, non-communicative healthcare portals.
- ✓ **Provider Communication Latency:** Critical delays exist when transferring patient records between primary doctors and specialists.
- ✓ **Low Telehealth Continuity:** Current virtual consult platforms lack real-time physiological metrics tracking during home-based monitoring.

| A Unified Health Ecosystem

Patient-Centric Portal

A zero-install browser environment allowing clients to view medical telemetry, book fast virtual encounters, and check verified wellness charts securely from any digital screen.

Secure Clinical Workspace

Empowers medical providers with real-time care-coordination timelines, instantly updating physiological records during automated billing sessions or live interactive consultations.

| Key Platform Capabilities

Telehealth Module

High-availability peer visual consultation pipelines utilizing lightweight browser data exchange protocols for flawless connections.

Telemetry Monitor

Live vital metrics gathering and visual reporting algorithms allowing care providers to observe dynamic biological trends on the fly.

Smart Schedulers

Algorithmic provider schedule optimization reduces idle clinical wait times and automates immediate calendar coordination.

| Iterative Adaptation Strategies

- ✔ **HIPAA Alignment Overhaul:** Refactored critical communication protocols to incorporate robust AES-256 state transitions for absolute user validation and verification.
- ✔ **Dynamic Network Adjustments:** Programmed a fallback offline mechanism that continuously caches telemetry, safely uploading metrics once stable internet connectivity is detected.
- ✔ **Universal Design Compliance:** Evaluated frontend typography layout rules according to WGAC 2.1 AA benchmarks, applying solid visual contrast properties across mobile screens.

Modern, Scalable Tech Stack

CATEGORY	TECHNOLOGIES UTILIZED	ARCHITECTURAL ADVANTAGE
Frontend Architecture	React.js Tailwind CSS	Ensures immediate rendering of analytics and optimal responsive scaling across viewport devices.
Backend Services	Node.js Express	Manages highly asynchronous client telemetry transfers through robust event handling structures.
Persistence & Cache	PostgreSQL Redis	Optimizes persistent electronic wellness directories with an ultra-fast temporary query layer.
Deployment Infrastructure	GCP Cloud Run Docker	Facilitates stateless microservices execution, dynamically auto-scaling to match fluctuating clinical request loads.

| Interactive Walkthrough

Live Platform Demo

Designed with containerized serverless code, the digital system enables effortless entry across desktop environments.

The client flow supports simple self-registration, rapid scheduling, and real-time telehealth meetings, providing seamless care on demand.

| Roadmap to Enterprise Health

Questions & Answers

Thank you for your active participation and interest.
